VORTEX R10 PRO
DOWNLOADS

Update the firmware of your Vortex R10 racing ESC to profit from the latest developments and functions.

Software update for the ORI65109 ESC (V1.67_120114)

- ORI65109, software now offers limited timing and boost tuning ability (maximum 10 degrees)

Software update for the ORI65101 and ORI65102 ESC's (V1.66_120107)

- ORI65102, improved mid-range and lower motor temperature when running Stock motors. Users can now choose between 2 different stock software and one modified software
- ORI65101, can now be used with the PC software via the program box and USB cable. Program box has to be updated via the PC software first
- ORI65101, motor startup current protection has been improved to increase the ESC reliability (the 65102 ESC received this update earlier)

Please follow the included instructions of the DSB-R Program Box to update your speed control.
